

WIN THE FIGHT AGAINST C. DIFF!

GERMBLAST
A HEALTHIER ENVIRONMENT BEGINS HERE.

Commonly known as *C. diff*, *Clostridium difficile* is a dangerous and easily transferable strain of bacteria that has become a serious issue in our nation's hospitals and other healthcare facilities. The elderly and those with compromised immune systems are at the greatest risk of acquiring *C. diff*. Once released into the environment, *C. diff* is very difficult to kill. Spores can remain for months and even years. GermBlast is the new standard in disinfection and sanitization. Our process eliminates *C. diff* spores from your facility's environment by utilizing our state-of-the-art GermBlast dry mist.

C. DIFF. (CLOSTRIDIUM DIFFICILE)

GERMBLAST DRY MIST

- Reduces incidences of CDI
- Safe for patients and staff
- Reduces the risk of cross-contamination surfaces
- Utilizes disinfectant that is EPA approved to kill *C. diff*
- Scrub time allows the chemical to effectively eliminate spores
- Disinfectant is approved for food and non-food contact surfaces

By partnering with you, we can test, treat, and track to ensure maximum protection against *C. diff*. Take the first step to keeping your patients, residents, and staff safe from *C. diff* by calling the number below.

Our goal is simple:
KEEP THE FIGHT OUTSIDE THE BODY.
