

PROTECTED FROM HAIs

GERM BLAST

A HEALTHIER ENVIRONMENT BEGINS HERE.

HEALTHCARE ASSOCIATED INFECTIONS

Healthcare-associated infections (HAIs) are one of the most common healthcare complications. The CDC estimates that up to \$35 billion dollars is spent each year treating HAIs.

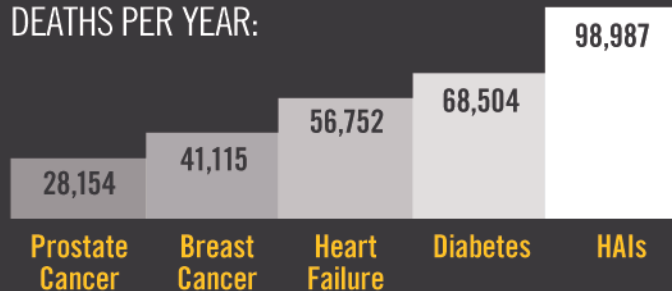

That's where the GermBlast solution can make a difference! By partnering with you, **we can test, treat, and track** to ensure maximum protection against HAIs and improve HCAHPS. Our on-site process has remarkable **kill rates of up to 99.999%** of bacteria, viruses, and fungi, yet it is **environmentally safe**.

On average, your length of stay in the hospital increases by **17.6 days** if you get an HAI.

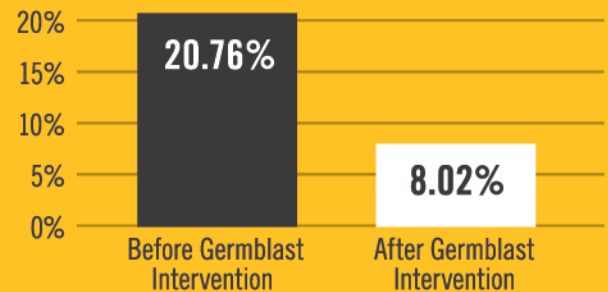

HAIs kill more people each year than Breast Cancer and Prostate Cancer combined

DEATHS PER YEAR:

After using GermBlast, a 400 bed hospital in Texas experienced a decrease in their average infection rate in critical care areas from 20.76% to 8.02% – a 61% reduction. Based on HAI cost estimates from the CDC, the hospital will save an estimated \$12.5 million in direct HAI costs!

INFECTION RATE COMPARISON

RESULTS YOU CAN EXPECT:

- Improved HCAHPS
- Positive Community Awareness
- Bioburden Reduction
- Decreased Patient Length of Stay
- Infection Rate Reduction
- Improved Environmental Reporting
- Improved Data Collection
